Title: A mill for rolling very light-gauge steel strips

..... Ref: TAST 101, page 14, Jan 1958

..... The following is a copy of a technical report submitted by the
..... Institute of Technology of the Soviet Union to the Soviet Metal Rolling

..... Institute of Technology of the Soviet Union. The report discusses the design of a mill for rolling very light-gauge steel strips. The report includes a description of the mill's design, operating principles, and performance characteristics. The report also includes a discussion of the mill's potential applications and a summary of the results of the research.

Mekhanicheskoye oborudovaniye volochil'nykh i lentoekatnykh tsekhov (Mechanical Equipment of Drawing and Strip Rolling Mills) Moscow, Metallurgizdat, 1957. 338 p. 4,100 copies printed.

Ed.: Sidorov, V.N., Engineer; Tech. Ed.: Evenson, I.M.

PURPOSE: This book is intended as a textbook for metallurgical teknikums. It may be used by designers and personnel in metal drawing and strip rolling workshops.

COVERAGE: The book describes basic types of modern metal drawing machines and strip rolling mills of USSR construction. The methods of computing the working forces in drawing and rolling are presented and the instruments used for measuring

Card 1/15

Mechanical Equipment of Drawing (Cont.) 689

these forces are described. Maintenance and servicing these machines, accessories and parts is explained. Suggestions for storage of spare parts and fabrication of component parts are given. The author thanks A.I. Tselikov, Corresponding Member of the Academy of Sciences, USSR, for his advice and Engineer D. Ya. Gurevich for reviewing the book. There are 44 references of which 42 are Soviet and 2 are English.

TITLE: Resistance Welding in Steel Sheet Production

PERIODICAL: Svarochnoye proizvodstvo, 1959, Nr 7, pp 34-39(USSR)

ABSTRACT: The experience in introducing resistance butt welding at metallurgical plants showed that resistance welding may produce an essential engineering and economic effect, especially, when together with a well adjusted butt welding machine some other, higher requirements of the metal strip are met. The equipment developed and the technology of butt-welding of strips which was tested under difficult work conditions of metallurgical plants, is a means for increasing the productivity of machinery for cold-rolling of sheets. This process must find wide-spread application in new rolling-mill shops which are to be constructed in accordance with the Seven-Year-Plan. In table 1 the authors present basic data of TeNIITMASH butt welding

Cará 1/2

SOV/135-50-7-10/15

Resistance Welding in Steel Sheet Production

machines. Such equipment was developed by TsNIITMASH during the past years and was installed at the plants "Elektrostal'", "Zaporozhstal'", Magnitogorskiy metallurgicheskiy kombinat (Magnitogorsk Metallurgical Combine). Fig. 2 shows a welding machine 1700 built by EZTM, used for welding steel strips in a rolling mill, whereby such processes as pickling, tinning, etc. may be performed continuously. In table 2 the authors present data for welding low carbon steel strips at welding machines 1600 and 1700. There are 2 photographs, 9 diagrams, 2 tables and 1 graph.

TITLE: Measuring and Testing Methods in a High-Voltage Laboratory
(Czechoslovakia) (Metodika izmereniy i ispytaniy v laboratorii vysokogo
napryazheniya /Chekhoslovakija/)

PERIODICAL: Chekhosl. tyazh. prom-st', 1957, Nr 5, pp 49-53

ABSTRACT: High-voltage laboratory equipment at the Power-Engineering Institute, Bekhovitsy (Czechoslovakia), permits testing insulation up to a rated voltage of 600 kv in accordance with international standards. In the smaller hall, equipment up to 110-kv rated voltage is tested by AC and impulse voltages. In the larger hall, there are 2.25-Mv cascade transformers and a 3.2-Mv impulse generator; here, all equipment with a rated voltage of 110-600 kv can be tested. Voltages up to 1.5 Mv are measured by a sphere spark gap with a 1,500-mm diameter sphere. Higher voltages are measured by indirect methods; each of

Card 1/2

SOV/112-59-2-2825

Measuring and Testing Methods in a High-Voltage Laboratory (Czechoslovakia)

the three transformer cascades is equipped with a capacitance potential divider whose secondary capacitor is matched to a peak voltmeter. Impulse voltages over 1.5 Mv can be measured by a capacitance-resistance potential divider. In the larger hall, there is also a rupturing-capacity-test outfit with a range up to 400 Mv at 22 kv. Currents, voltages, and powers are recorded by a 9-loop oscillograph. Recovery voltages can be measured by a 2-beam oscillograph with a periodic time sweep. Rain-making outfits are mounted in both halls along with drainage and a supply of specially prepared water having a conductance of 100 micro-ohm. The water conductance is remote measured. An electro-acoustical probe serves to detect the breakdown between electrodes in a liquid dielectric.

AUTHOR: Kogulin, Yu.N.
TITLE: The Electromagnetic Field of a Radiator for Large
Parameters

PERIODICAL: Izvestiya Akademii nauk SSSR, Seriya geofizicheskaya,
1960, No.10, pp.1504-1506

TEXT: Interpretation of field observations obtained using
electromagnetic frequency prospecting often requires knowledge of
the behaviour of the electromagnetic field of a radiator placed on
the surface of a horizontally layered medium. The present paper
considers the case of large absolute values of a parameter π_1 ,
which is a product of a complex wave-number x_1 for the uppermost
layer of the medium and the distance from the point of
observation to the radiator. The author uses his own "effective
field" method (Ref.2) which gives asymptotic formulae which are
valid for all values of a parameter $z = 2hx_1$, where h is the
thickness of the upper layer in a two-layer system. The
effective-field method is applied to a stratum of finite

The Electromagnetic Field of a Radiator for Large Parameters

conductivity and of finite thickness lying on an infinitely thick base which is a perfect conductor, and to a stratum of finite thickness and conductivity lying on an infinitely thick base which is a perfect dielectric. The solution for the case $h \rightarrow 0$ is also given in terms of $p_2(x_2)$. The paper is entirely theoretical. There are 3 Soviet references.

7102. CHANGES OF THE FUNDUS IN THE EARLY STAGES OF HYPERTENSIVE
VASCULAR DISEASE (Russian text) - Kogurov B. I. - VESTN.OFTALM.
1958, 4 (19-23) Tables 2

163 patients with hypertensive vascular disease (H) (with a slow course) were observed from 1953 to 1957. Among them, 115 patients were in stage I of the disease, and 45 in stage II; 227 healthy persons were also examined. The changes of the fundus of the eye which are considered to be characteristic of H (constriction of retinal arteries, their tortuous course and uneven calibre, the change of the arterial reflex, slight opacity of the retina around the optic disc, and along the large blood vessels) were rather frequently found in healthy persons. The number of changes increased in patients during stage I of H, and especially during stage II. The changes proved to be rather stable, even in stage I. From this it may be assumed that the types of vessel described above are variants of the normal. Persons with such a vascular system are inclined to H, especially under unfavourable conditions acting through the CNS.
